WOOD	4	70	9	9	11	20	28	9	4	21	24	3	M	13

Fire danger is **MODERATE** today. Above normal temps and moderate Rh's are starting to dry fine fuels. Long term drought indicators, i.e. KBDI and 1000hr dead fuel moisture values have improved over the last couple of weeks but drought conditions remain in place statewide. See the web address below to the current U.S. Drought Monitor released today.

<http://droughtmonitor.unl.edu/Home/RegionalDroughtMonitor.aspx?northeast>

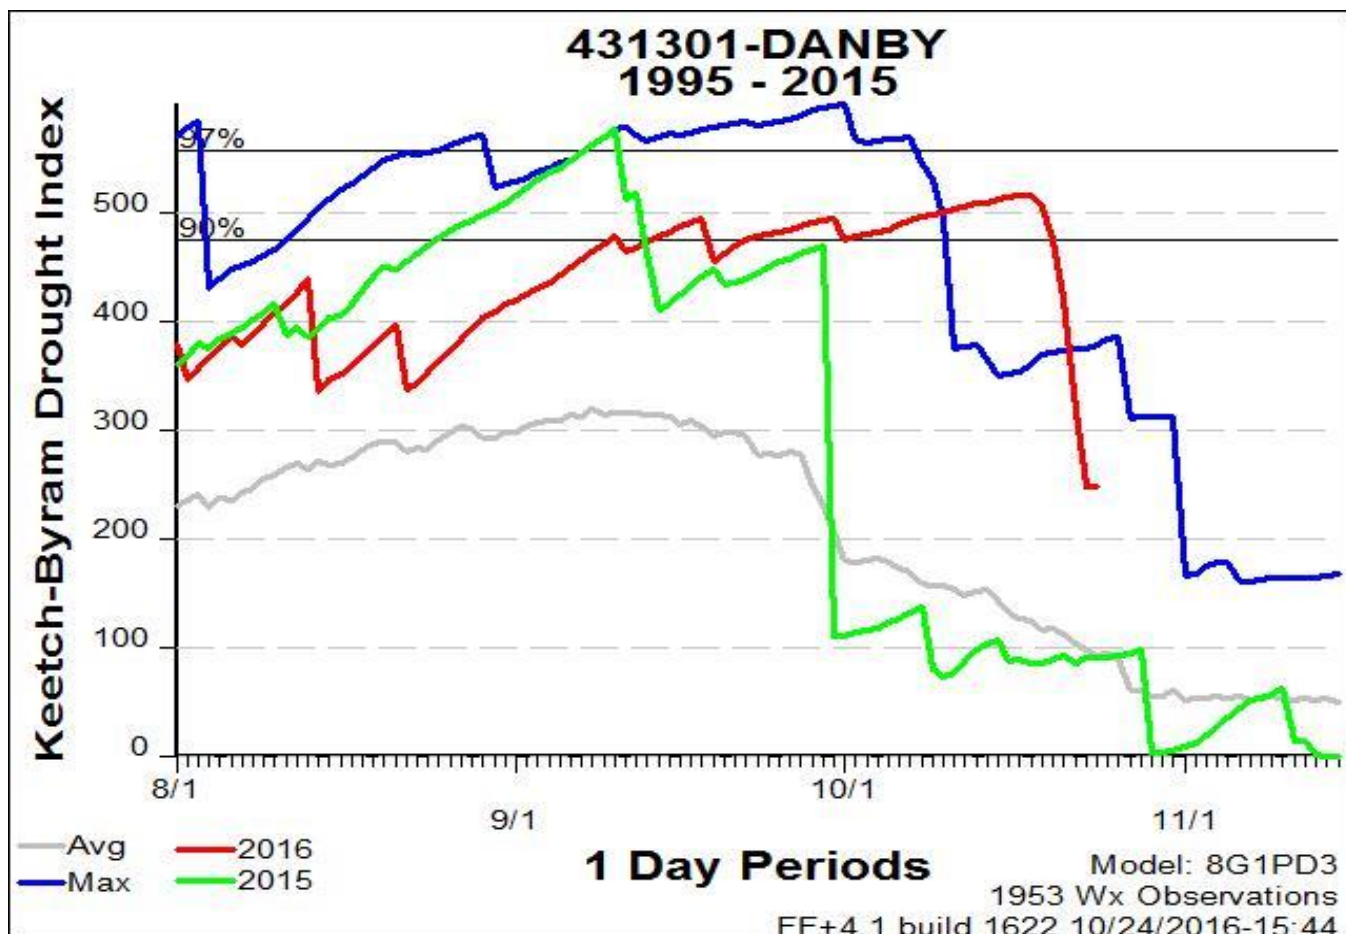

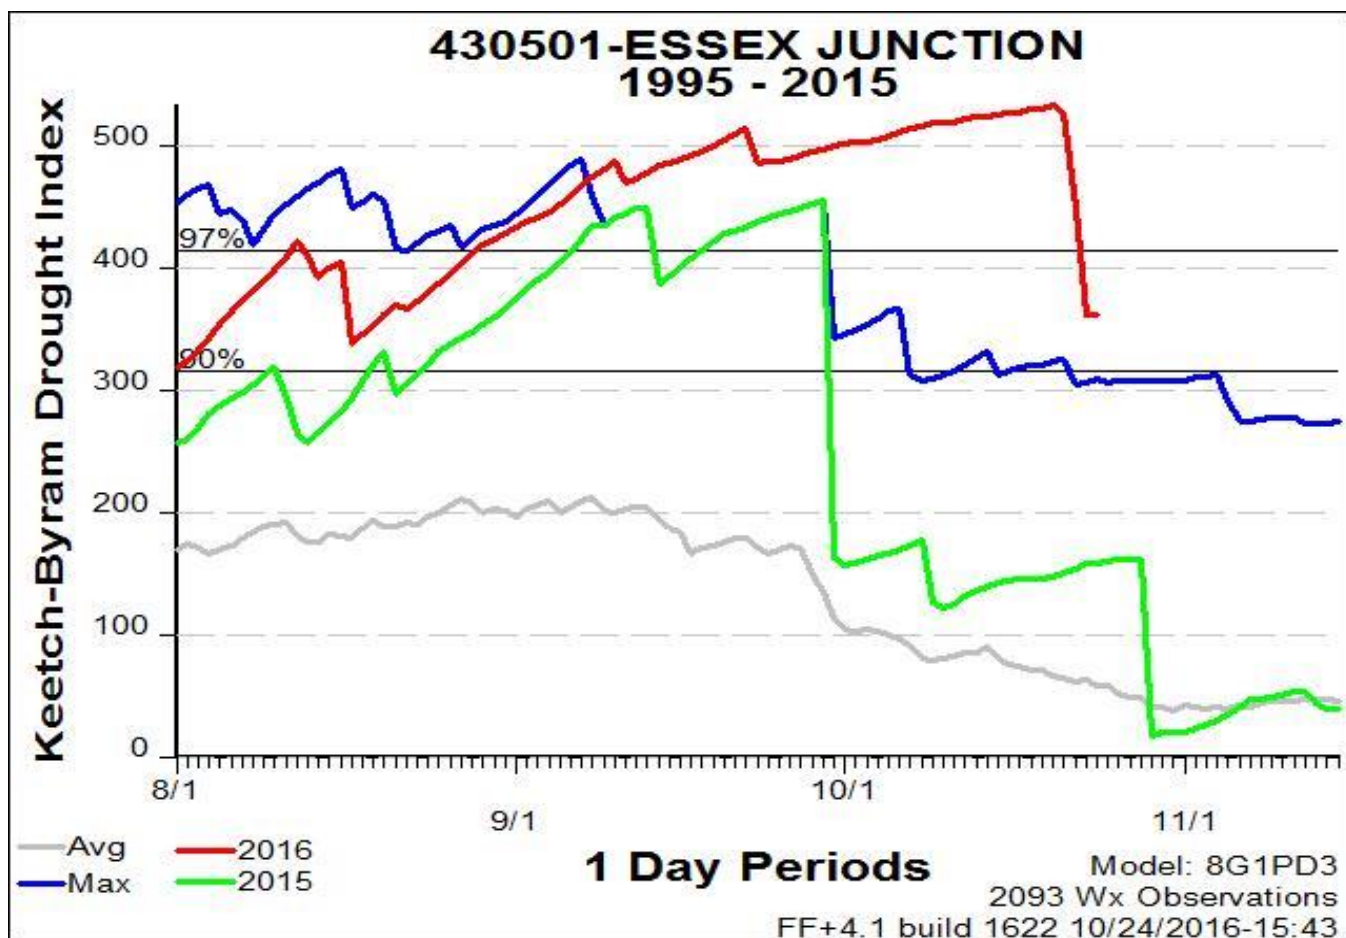

Now that the leaves are on the ground and most vegetation is cured, plenty of fine 1-hr fuels are in place. These fuels dry quickly especially on dry and windy days increasing the chance for surface fires. Tomorrow morning, light showers are expected with strong, gusty winds. High pressure is expected over the weekend along with above normal temps, sunny skies and gusty winds. Fire danger will be MODERATE and possible HIGH over the weekend. Open burning should only be allowed where fuels and winds are favorable.

[Six Minutes for Safety: An interagency safety initiative that address high-risk situations that historically get firefighters in trouble.](#)
